# Initialize the ONTAP Mediator

You must initialize Mediator on one of your cluster peers before SM-BC can perform planned and automatic unplanned failover operations.

### About this task

You can initialize Mediator from either cluster. When you issue the `mediator add` command on one cluster, Mediator is automatically added on the other cluster.

### Steps

1. Initialize Mediator on one of the clusters:

```
snapmirror mediator add -mediator-address IP_Address -peer-cluster cluster_name -username user_name
```

### Example

```
cluster1::> snapmirror mediator add -mediator-address 192.168.10.1 -peer-cluster cluster2 -username mediatoradmin
Notice: Enter the mediator password.

Enter the password: *****
Enter the password again: *****
```

2. Check the status of the Mediator configuration:

```
snapmirror mediator show
```

Mediator Address	Peer Cluster	Connection Status	Quorum Status
192.168.10.1	cluster-2	connected	true

`-quorum-status` indicates whether the SnapMirror consistency group relationships are synchronized with Mediator.
