Installing the ONTAP Mediator	
-------------------------------	--

# **Installing the ONTAP Mediator**

You must install the ONTAP Mediator, which includes accepting the licensing agreement, before you can configure and use the SnapMirror Business Continuity solution.

## Before you begin

The following software is required:

- ONTAP Mediator 1.2 or later
- One of the following Linux distributions:
  - RHEL 7.6 or 7.7
  - CentOS 8.0 or 8.1

#### About this task

You should install the ONTAP Mediator at an external site that is physically separated from the two ONTAP clusters.

### Steps

- 1. Sign into the Linux system that will host the ONTAP Mediator.
- 2. Download the mediator installation package from the ONTAP Mediator page.

NetApp Downloads: ONTAP Mediator

3. Install the ONTAP Mediator and respond to all prompts as required:

```
./ontap-mediator_1.2
```

4. Optionally replace the self-signed SSL and certificate authority (CA) with the third party validated SSL Certificate and CA. Copy the contents of the ca.crt file from the ONTAP Mediator directory:

```
/opt/netapp/lib/ontap_mediator/ontap_mediator/server_config
```

5. At the ONTAP CLI, install the certificate on both the local and peer cluster:

```
security certificate install -type server-ca -vserver cserverName
```
